Release Date 12.12.2024*

Welcome to the latest release for Movie Magic Budgeting. Special thanks to all our valued EP clients for your feedback and suggestions.

*Release date and features are subject to change.

What's New?

Real-time Budget Editing and Comparison

- Leverage the interactive compare screen to support real-time editing and real-time comparison in the cloud — refreshing linked budgets show live views, replacing Movie Magic Budgeting 7's static report.

Compare Up to 15 Budgets Simultaneously for Episodic Projects

- Allow up to 15 budgets to be compared against a primary budget, ideal for episodic projects.
- Enable studios to compare sub-budgets against a projected series total budget for episodic budgeting.

Budget Comparison Report Customization and Legibility

- Display more columns by repeating account numbers on subsequent pages when there are too many columns to fit on one page.
- Allow titles to wrap to two lines for better readability.
- View only the base budget by removing all compare budgets.

Find Function

- Eliminate the need for manual selection of account numbers when using the find function.
- Toggle the find function to use the last used search criteria (Control/Command+F) and search by account number (Control/Command+J).
